Around 870 families in Nuristan were provided with potable water

With the total cost of 10,933,828 AFN, four water supply projects have been recently accomplished and handed over in center, Waygal and Wama districts of Nuristan province. These projects included construction of four gravity-fed water supply networks in Shar-i-Naw village in Asadabad, Hoz and Sheena Gul villages of Waygal district and Archano Ulya village in Wama district.

With the completion of these water supply networks, around 373 families in Shar-i-Naw village, around 155 families in Hoz village, around 190 families in Sheena Gul village, and around 155 families in Archano Ulya village got access to clean drinking water.

These projects were implemented through the Rural Water Supply and Sanitation Program (Ru-WatSP) of Ministry of Rural Rehabilitation and Development (MRRD).

It is worthy to be mentioned that over 70% budget of these projects was funded by UNICEF, while almost 30% of it was funded by Ministry of Finance (MoF) through the State budget.

Clean drinking water provided for 250 families in Shekh Mesri Residential Area in Surkhrod district

The Rural Water Supply and Sanitation Program (Ru-WatSP) of Ministry of Rural Rehabilitation and Development (MRRD) constructed and handed over a solar-powered water supply network in Shekh Mesri Township in Surkhrod district of Nangarhar province. The project cost 2,559,676 AFN which were funded through the State budget by Ministry of Finance. The construction affairs of this project created as many as 1,475 working days, and with its completion, around 250 families got access to clean drinking water.

Around 300 families in Qadis district got access to potable water

With the total outlay of 3,264,000 AFN, funded by UNICEF, a solar-powered water supply network has been recently accomplished and handed over in Khalifa Ayaz village in Qadis district of Badghis province. With the completion of this water supply network, around 300 families in Khalifa Ayaz village got access to piped drinking water at their homes. The project included digging of one deep well, construction of a 40-cubic meter water reservoir, extension of 3,785-meter long pipe network and installation of 20 solar panels. The project was implemented by the Rural Water Supply and Sanitation Program (Ru-WatSP) of Ministry of Rural Rehabilitation and Development (MRRD).
